

Water Cycle

Name:

.....

Date:

.....

Fill in the blanks with the correct word or phrase from the word bank below.

.....

precipitation

evaporation

transpiration

condensation

water vapour

clouds

water

.....

The _____ cycle is the process by which water moves through the Earth's atmosphere and surface.

The first step in the water cycle is _____, which occurs when the sun heats up water in oceans, lakes, and rivers, and turns it into _____.

The second step in the water cycle is _____, which occurs when the water vapour rises into the atmosphere and cools down, forming _____.

The third step in the water cycle is _____, which occurs when the water droplets in clouds combine and become heavy enough to fall as rain, sleet, and snow.

The fourth step in the water cycle is _____, which occurs when plants release water into the atmosphere from the surface of the leaves.

Water Cycle

Answer

The **water** cycle is the process by which water moves through the Earth's atmosphere and surface.

The first step in the water cycle is **evaporation**, which occurs when the sun heats up water in oceans, lakes, and rivers, and turns it into **water vapour**.

The second step in the water cycle is **condensation**, which occurs when the water vapour rises into the atmosphere and cools down, forming **clouds**.

The third step in the water cycle is **precipitation**, which occurs when the water droplets in clouds combine and become heavy enough to fall as rain, sleet, and snow.

The fourth step in the water cycle is **transpiration**, which occurs when plants release water into the atmosphere from the surface of the leaves.
